NEW SELF-ADHESIVE POINTS

- Perfect nail sealing
- Tabs better adhesion on the roof
- Easy identification of the nailing points
- Synchronized points for perfect aesthetic

G-EVO BASALT CERAMIC GRANULES EVOLUTION

The features of our asphalt shingles with G-EVO granules are:

- **Super adhesion** of the G-EVO granules to the bituminous layer
 - **High abrasion resistance:** the results of the Brush Test carried out according to the strict ASTM D-4977/89 standard highlight important differences in the loss of granules between the bituminous shingles with G-EVO granules and those of the competitors
 - Consequently **greater and longer protection** of the bituminous layer from UV rays
 - **Less degradation** of the bituminous compound
 - **Longer life** of the bituminous shingles over time
- **Super hydrophobicity** of the G-EVO granules
 - **Better color brilliance** over time
 - **Anti-algae performance**
